

TOGETHER WE CAN FIND A CURE FOR JUVENILE MYOSITIS

Each year, approximately 2 to 4 children in a million in the United States are diagnosed with the rare and life-threatening autoimmune diseases Juvenile Dermatomyositis and Juvenile Polymyositis, collectively known as Juvenile Myositis (JM). JM causes the body's own immune system to attack healthy cells and tissues, which can cause pain, weakness, inability to walk and disfigurement. In some severe cases it can even be fatal. And there is no cure...YET. But together, we can change that.

You can now support Cure JM through the CFC Workplace Giving Campaign. Simply enter **Cure JM's CFC number: 94746** on your campaign pledge card.

Cure JM Foundation is the largest charitable supporter of Juvenile Myositis research. A 501(c)(3) nonprofit organization, it is also the ONLY organization that solely supports the JM community.

All federal workers — civilian employees, military personnel and postal workers — are eligible to give. So ask your supervisor for details, or learn more by contacting Cure JM at info@curejm.org or **(760) 487-1079**.

Fred, United States Army, with his two daughters.
